

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-29. (Canceled)

30. (Currently Amended) A liquid crystal display device comprising:

a first electrode;

a second electrode opposing the first electrode;

a dot area, formed at an overlapping portion of the first electrode and the
second electrode, for display,

the dot area including a first section and a second section;

a reflector arranged behind the dot area;

a color filter arranged in the first section; and

a layer arranged in the second section, the layer being substantially transparent,

and

no color filters being arranged in the second section.

31. (Currently Amended) A liquid crystal display device according to claim 30,

the dot area including a light-variable area, in which the color filter is
arranged, for modulating light,

wherein the color filter occupies 15% or more and 45% or less of the light-
variable area.

32. (Canceled)

33. (Currently Amended) The liquid crystal display device according to claim 30,
the color filter being divided into a plurality of parts.

34-36. (Canceled)

37. (Currently Amended) A liquid crystal display device comprising:

a first electrode;

a second electrode opposing the first electrode;

a plurality of dot areas arranged in a matrix ~~form~~ formed at an overlapping portion of the first electrode and the second electrode, for display, wherein each of the dot areas includes a first section and a second section;

a reflector arranged outside the first electrode and the second electrode;

a color filter arranged in the first section; and

a layer arranged in the second section, and being substantially transparent.

38. (Currently Amended) A liquid crystal display device according to claim 37, ~~the~~ a thickness of the color filter and a thickness of the layer ~~is~~ are different, wherein ~~the~~ a difference of ~~level~~ the thicknesses is 0.5 μ m or less.

39-48. (Canceled)

49. (Currently Amended) A liquid crystal display device according to claim 30, further comprising:

a plurality of dot areas, each including a first section and a second section, for display;

a plurality of color filters, each having different colors to the other and arranged in the first section of the respective one of dot areas,

wherein no color filters are arranged in the second section of each of the dot areas.

50. (Currently Amended) A liquid crystal display device according to claim 49, further comprising:

a black mask provided between ~~the~~ adjacent dot areas.

51. (Currently Amended) A liquid crystal display device according to claim 50, the black mask including a combination of the plurality of color filters.

52. (Currently Amended) A liquid crystal display device according to claim 49, further comprising:

a layer with transparency arranged between ~~the~~ adjacent dot areas.

53. (Currently Amended) A liquid crystal display device according to claim 49, the plurality of color filters including red filter and cyan filter.

54. (Currently Amended) A liquid crystal display device according to claim 49, the plurality of color filters including red filter, blue filter, and green filter.

55. (Currently Amended) A liquid crystal display device according to claim 49, a contrast ratio of display being 15:1 or more.

56. (Currently Amended) A liquid crystal display device comprising:

a first electrode;

a second electrode opposing the first electrode;

a plurality of dot areas arranged in a matrix ~~form~~ formed at an overlapping portion of the first electrode and the second electrode, for display, wherein each of the dot areas includes a first section and a second section;

a reflector arranged outside of the first electrode and the second electrode; and

a color filter selectively arranged in the first section and a transparent area having no color filter arranged in the second section.

57. (Currently Amended) A liquid crystal display device according to claim 56,

~~wherein the dot area includes a first section, in which the color filter is arranged, and a second section,~~

wherein the liquid crystal display device is driven by ~~the~~ voltages applied to the dot area,

the voltages comprising:

a first voltage applied to the first section of the dot area; and

a second voltage applied to the second section of the dot area,
the second ~~voltages~~ voltage being applied to the dot area while the first voltage
is applied thereto,

each of the voltages being different to the other.

58. (Currently Amended) A liquid crystal display device according to claim 57,
the first voltage being lower than the second voltage.

59. (Currently Amended) A liquid crystal display device according to claim 30,
further comprising:

an active element connected to one of the first and ~~the~~ second electrodes.

60. (Currently Amended) A liquid crystal display device according to claim 37,
further comprising a layer with transparency arranged at peripheral area of the dot area.

61. (Currently Amended) A liquid crystal display device comprising:
a first electrode;
a second electrode opposing the first electrode;
a plurality of dot areas arranged in a matrix ~~form~~ formed at an overlapping
portion of the first electrode and the second electrode, wherein each of the dot areas includes
a first section and a second section;

a reflector arranged outside the first electrode and the second electrode;
a transparent area having no color filter arranged in the second section; and
a color filter arranged in the first section, wherein ~~the~~ a size of the color filter
is smaller than ~~that~~ a size of the dot area.

62. (Currently Amended) A liquid crystal display device comprising:
a first electrode;
a second electrode opposing the first electrode;

a plurality of dot areas arranged in a matrix ~~form~~ formed at an overlapping portion of the first electrode and the second electrode, each of the dot areas including a first section and a second section;

a reflector arranged outside of the first electrode and the second electrode;

a color filter arranged in the first section, and

a layer arranged in the second section, the layer being substantially transparent,

the first section comprising about 15% or more and about 45% or less of the

dot area.

63. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 30.

64. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 37.

65. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 56.

66. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 61.

67. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 62.

68. (New) A liquid crystal display device comprising:

a first electrode extending in a first plane;

a second electrode opposing the first electrode and extending in a second plane

that is substantially parallel to the first plane;

a dot area, formed at an overlapping portion of the first electrode and the second electrode, for display,

the dot area including a first section and a second section;

a reflector arranged behind the dot area;
a color filter arranged in the first section; and
a layer arranged in the second section, the layer being substantially transparent,
no color filters being arranged in the second section, and
the color filter and the layer are disposed adjacent to each other in a common
plane that is substantially parallel to the first and second planes.

69. (New) A liquid crystal display device according to claim 68,
the dot area including a light-variable area, in which the color filter is
arranged, for modulating light,
wherein the color filter occupies 15% or more and 45% or less of the light-
variable area.

70. (New) A liquid crystal display device according to claim 68, the color filter
being divided into a plurality of parts.

71. (New) A liquid crystal display device according to claim 68, further
comprising:
a plurality of dot areas, each including a first section and a second section, for
display;
a plurality of color filters, each having different colors to the other and
arranged in the first section of the respective one of dot areas,
wherein no color filters are arranged in the second section of each of the dot
areas.

72. (New) A liquid crystal display device according to claim 71, further
comprising:

a black mask provided between adjacent dot areas.

73. (New) A liquid crystal display device according to claim 72,

the black mask including a combination of the plurality of color filters.

74. (New) A liquid crystal display device according to claim 71, further comprising:

a layer with transparency arranged between adjacent dot areas.

75. (New) A liquid crystal display device according to claim 71, the plurality of color filters including red filter and cyan filter.

76. (New) A liquid crystal display device according to claim 71, the plurality of color filters including red filter, blue filter, and green filter.

77. (New) A liquid crystal display device according to claim 71, a contrast ratio of display being 15:1 or more.

78. (New) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 68.
